

DP[®]

EXTENDED SURFACE PLEATED FILTERS

**MERV 10/8A Standard and High-Capacity
Extended Surface Pleated Filters**

MERV 10/8A Efficiency 2" Filter at 500 FPM

Standard Capacity:	.25 Initial Resistance (In. W.G.)
High-Capacity:	.20 Initial Resistance (In. W.G.)

DP[®] EXTENDED SURFACE PLEATED FILTERS

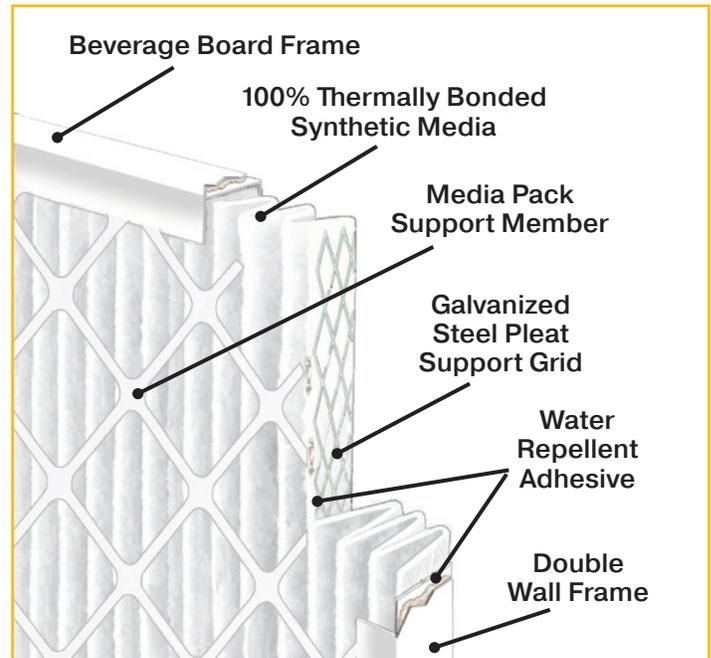

Using ground-breaking R&D to provide a lower pressure drop and higher dust holding, the DP filters are better than ever. And with the largest inventory of pleats in the industry, availability is never an issue.

Media:

- 100% thermally bonded synthetic, proprietary media resists moisture and damage
- Independently tested and verified for quality control
- Extremely low pressure drop and high dust holding capacity

Construction:

- Moisture resistant beverage board frame
- Two-piece frame provides rigidity with double-wall thickness around outer edge
- Die-cut pattern maximizes contact points between media pack and frame providing strength and rigidity
- 4" models use die-cut finger separators to stabilize each pleat
- Water repellent, high-strength adhesive used to bond frame with media pack
- Corrosive-resistant, expanded metal support grid made of galvanized steel
- Pleat tips of media pack bonded to diagonal support members

All DP filters are designed with a consistent pleat shape on predetermined centers causing dirt to collect evenly over the entire surface of the media. Fully utilizing every square inch of media results in a slow, steady rise in resistance for maximum dust holding capacity.

Pleat Consistency:

DP Merv 10/8A uses sophisticated production control techniques to ensure consistent pleat count, height, shape, and spacing. This uniform spacing contributes to a better-performing pleat with low pressure drop, full depth dust loading, and longer service life.

Durability:

The Pleats hold together even when wet due to moisture resistant media and construction, preventing delaminating, excessive buckling, collapsing, racking, warping, and bending. Additionally, the galvanized steel metal grid resists rust, maintains pleat shape, and prevents fluttering in even the most rugged conditions.

Compare:

Compare the performance and value of DP pleats to other types of filters, including disposable panels, ring panels, pads and frames, and permanent filters. The DP line has significantly lower initial resistance levels to aid in your energy savings initiatives, and it also outperforms the alternatives in efficiency, dust holding capacity, durability, and price.

DP® Extended Surface Pleated Filters

- NOTES:**
1. MERV 10 per ASHRAE Standard 52.2-2017, MERV-A 8-A per ASHRAE Standard 52.2017 with Appendix J
 2. Rated Face Velocity: 1" - 300 FPM, 2" & 4" - 500 FPM
 3. Recommended final resistance 1.00" W.G.
 4. Filters may be installed with pleats either vertical (recommended) or horizontal
 5. Continuous Operating Temperature: 225°F
 6. Classified per UL 900 for flammability.

DP® Extended Surface Pleated Filters

Value-Added Summary:

- Standard and high capacity MERV 10, MERV-A 8-A
- Synthetic media does not support microbial growth
- Low pressure drop with high dust holding
- Energy saving
- Durable and damage resistant construction
- Engineered and designed for high strength and rigidity
- Pleat consistency maximizes performance
- Water and moisture resistant media, frame, and adhesive

Applications:

- Virtually any application or air handling system
- Built-up filter banks, central station air handlers, rooftop units, side access housings
- Stage 1 filters in multi-stage systems

Pleat Count (Pleats per foot)	1"	2"	4"
DP High-Capacity	14.0	15.0	11.0
DP Standard Capacity	12.0	10.0	9.0

Underwriters Laboratories, Inc. Classification:

DP filters are classified per UL Standard 900 for flammability.

Operating Temperature Limit:

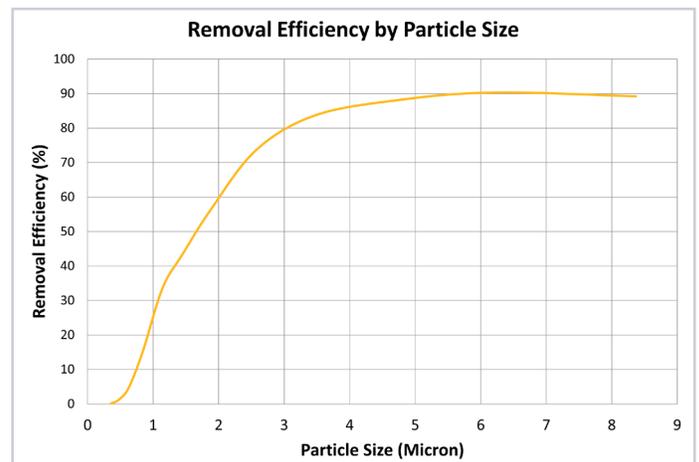

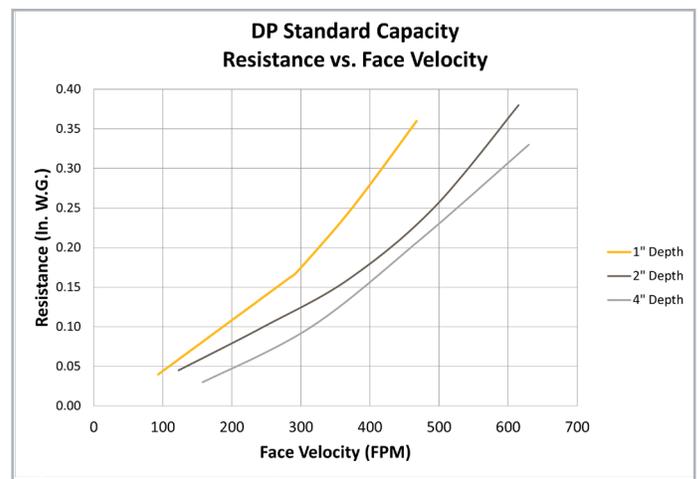

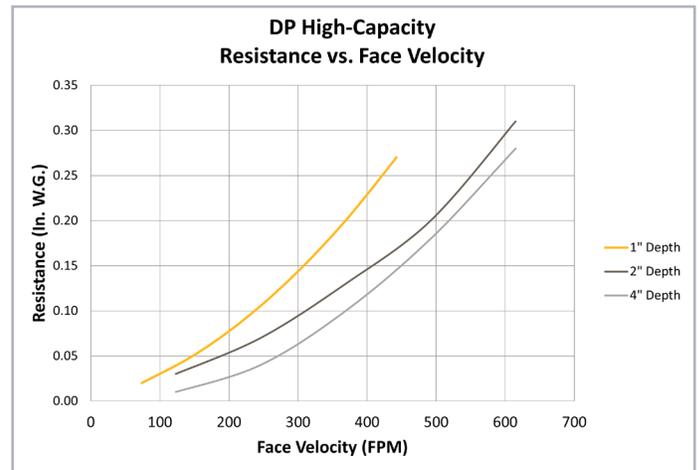

Maximum operating temperature is 225°F (107°C).
